QUALITY COMPONENTS TUNED TO YOUR NEEDS

The SonnenBatterie is a complete system – ready for connection. This means that inside of every SonnenBatterie you'll find not only extremely durable battery modules but also an inverter, an intelligent energy manager, measurement technology and the software to operate it all smoothly all in one handy box. In contrast to most other battery systems on the market the SonnenBatterie components are built into a single high-quality casing and perfectly attuned to each other, therefore ensuring maximum longevity and the highest quality in minimal space.

Every household has its own energy requirements, and that's why the SonnenBatterie was developed as a multi-stage storage system that can be adapted to most energy needs.

With storage sizes ranging from 2 kWh to 16 kWh the SonnenBatterie will power a detached house, a multi-family house or an apartment block. The capacity of the SonnenBatterie can be expanded in blocks of 2 kWh.

NEVER WORRY ABOUT THE LIGHTS GOING OUT

Electricity blackouts are quite rare in the UK and will only last a couple of minutes or hours at the most, although these outages are always unpredictable and can cause problems. SonnenBatterie will supply emergency power to ensure you are safe, and it will reliably supply your household with stored energy during these power failures.

SonnenBatterie Protect can be ordered as an option when buying your SonnenBatterie or upgrade to it later.
